

OEG
Manufacturing

Geek+

The OEG warehouse in Hessisch Oldendorf stores over 80 000 different spare parts and accessories for heating, ventilation, and air conditioning (HVAC) systems and supplies wholesalers and manufacturers in Germany, as well as international markets.

PAIN POINTS – The unique nature of OEG's specialized storage units

- *OEG has a wide array of specialized products. The company needs to find a storage solution which is flexible enough to match its SKUs of all sizes.*
- *OEG attaches great importance to quick supply for its customers*
- *As the business scales up, the operational costs have been rising*

SOLUTION

- *150 Geek+ P800 robots were deployed in OEG's 15,000 m² warehouse.*

VALUE

- *Warehouse automation implemented in just three months*
- *An implementation program was devised that caused nearly no disruption to OEG's business*
- *No changes in material flows was necessary despite the introduction of Geek+ Goods-to-Person System*
